Subject Index of Volume 19

Air exchange
caused by wind effects through (window) openings distributed evenly on a quasi-infinite surface, 93
Air humidity
modelling of indoor: the dynamic behaviour within an enclosure, 61
Airflow
effects of thermal radiation on, with displacement ventilation: an experimental investigation, 263
Air-to-air heat exchanger
performance, 215

Building
towards an integral approach of, and HVAC system, 297
Building energy diagnostics
a tool for: non-intrusive flow measurement by cross-correlation of temperature variations, 81
Building parameter estimates
local weather correlations and bias in, from energy-signature models, 113
Building services
analysis of energy use in, of the industrial sector in California: two case studies, 133
Buildings
commercial, energy signature, models for: test with measured data and interpretation, 143
construction of, estimation of energy consumption and amount of pollutants due to, 303

Cinema hall
non-air-conditioned, design parameters of, for thermal comfort under arid-zone climatic conditions, 249
Comfort conditions
summer, statistical analysis of, in Athens, Greece, 285
Consumer assessment program
end-use load and: motivation and overview, 159
Convection
experimental investigation on free, inside a tent envelope of textile fabric, 291
Cooling load
a procedure for calculating, due to solar radiation: the shading effects from adjacent or nearby buildings, 11

Daylight
a study of luminous efficacy of, in Hong Kong, 45
Design parameters
of a non-air-conditioned cinema hall for thermal comfort under arid-zone climatic conditions, 249

Earth temperature
modelling the, using multiyear measurements, 1
ELCAP homes
analysis of water heater standby energy consumption from, 221
ELCAP
operational experience, 167
ELCAP residential sample
heat loss characteristics of the, 207
metered end-use consumption and load shapes from the, of existing homes in the Pacific Northwest, 179
Electrical energy consumption
HVAC system, daily variations in, in response to different weather conditions, 235
End-use load
and Consumer Assessment Program: motivation and overview, 159
Energy conservation
radiative properties of polymer coatings from the point of view of energy conservation, 87
Energy consumption
estimation of, and amount of pollutants due to construction of buildings, 303
water heater standby, analysis of, from ELCAP homes, 221
Energy diagnostics
building, a tool for: non-intrusive flow measurement by cross-correlation of temperature variations, 81
Energy signature models
for commercial buildings: test with measured data and interpretation, 143
local weather correlations and bias in building parameter estimates from, 113
Energy use
analysis of, in building services of the industrial sector in California: two case studies, 133
Example weather year
selection of an, for Hong Kong, 313

Fabric
textile, experimental investigation on free convection inside a tent envelope of, 291
Flow characteristics
of one-side-mounted windows, 105
Flow measurement
non-intrusive, by cross-correlation of temperature variations: a tool for building energy diagnostics, 81

Heat exchanger performance
air-to-air, 215
Heat loss characteristics
of the ELCAP residential sample, 207
Heat pump
a part load factor for a, derived from laboratory measurements, 125
Human body
algorithms for the calculation of view factors between, and rectangular surfaces in parallelepiped environments, 51
Humidity
indoor air, modelling of: dynamic behaviour within an enclosure, 61
Humidity control
temperature and, of indoor environmental spaces, 275
HVAC system
towards an integral approach of building and, 297

U·M·I

SHOULD READ SUBJECT INDEX VOLUME 19
(1992-1993).

HVAC system electric energy consumption
daily variations in, in response to different weather conditions, 235

Indoor air humidity
modelling of: dynamic behaviour within an enclosure, 61
Indoor environmental spaces
temperature and humidity control of, 275

Load factor
part, for a heat pump denved from laboratory measurements, 125
Load shapes
metered end-use consumption and, from the ELCAP residential sample of existing homes in the Pacific Northwest, 179
Luminous efficacy
a study of, of daylight in Hong Kong, 45

Measurements
multiyear, modelling the earth temperature using, 1
Metered end-use consumption
and load shapes from the ELCAP residential sample of existing homes in the Pacific Northwest, 179

Operational experience
ELCAP, 167

Pollutants
estimation of energy consumption and amount of, due to construction of buildings, 303
Polymer coatings
radiative properties of, from the point of view of energy conservation, 87

Radiation
effects of thermal, on airflow with displacement ventilation: an experimental investigation, 263
Radiative properties
of polymer coatings from the point of view of energy conservation, 87
Residential base sample
thermal analysis for the, 195

Sensitivity analysis techniques
for building thermal simulation programs, 21
Shading effects
from adjacent or nearby buildings: a procedure for calculating the cooling load due to solar radiation, 11
Solar radiation
a procedure for calculating cooling load due to: the shading effects from adjacent or nearby buildings, 11
Summer comfort conditions
statistical analysis of, in Athens, Greece, 285

Temperature
and humidity control of indoor environmental spaces, 275
earth, modelling the, using multiyear measurements, 1
Temperature variations
non-intrusive flow measurement by cross-correlation of: a tool for building energy diagnostics, 81
Tent envelope
experimental investigation on free convection inside a, of textile fabric, 291
Thermal analysis
for the Residential Base Sample, 195
Thermal comfort
design parameters of a non-air-conditioned cinema hall for, under arid-zone climatic conditions, 249
Thermal simulation programs
building, sensitivity analysis techniques for, 21

Ventilation
displacement, effects of thermal radiation on: an experimental investigation, 263
View factors
algorithms for calculation of, between human body and rectangular surfaces in parallelepiped environments, 51

Water heater
standby energy consumption, analysis of, from ELCAP homes, 221
Weather conditions
different, daily variations in HVAC system electrical energy consumption in response to, 235
Weather correlations
local, and bias in building parameter estimates from energy-signature models, 113
Weather year
selection of an example, for Hong Kong, 313
Wind effects
air exchange caused by, through (window) openings distributed evenly on a quasi-infinite surface, 93
Window openings
air exchange caused by wind effects through, distributed evenly on a quasi-infinite surface, 93
Windows
one-side-mounted, flow characteristics of, 105
